LINUX TUTORIAL

# AWS ECS

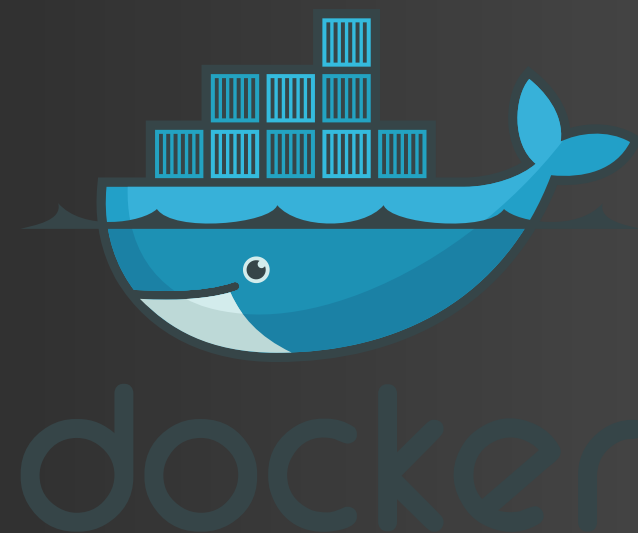

**Elastic Container  
Service**

# What is ECS

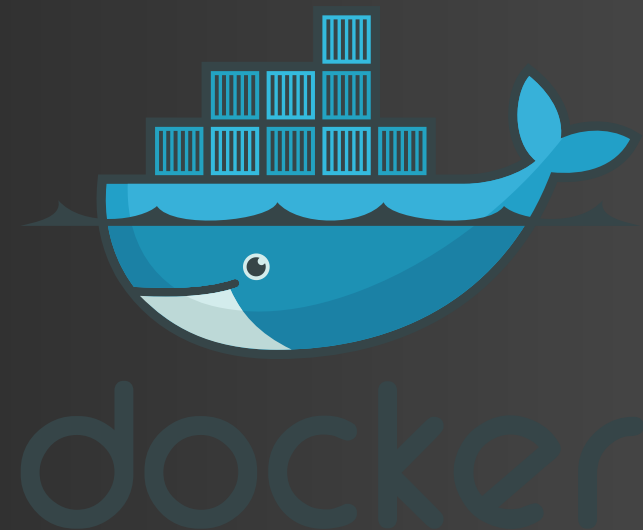

Is a cloud-based container management service that allows you to run and manage Docker containers on a cluster of virtual servers.

# Why ECS??

It automatically handles

- Creation
- Management
- Updating

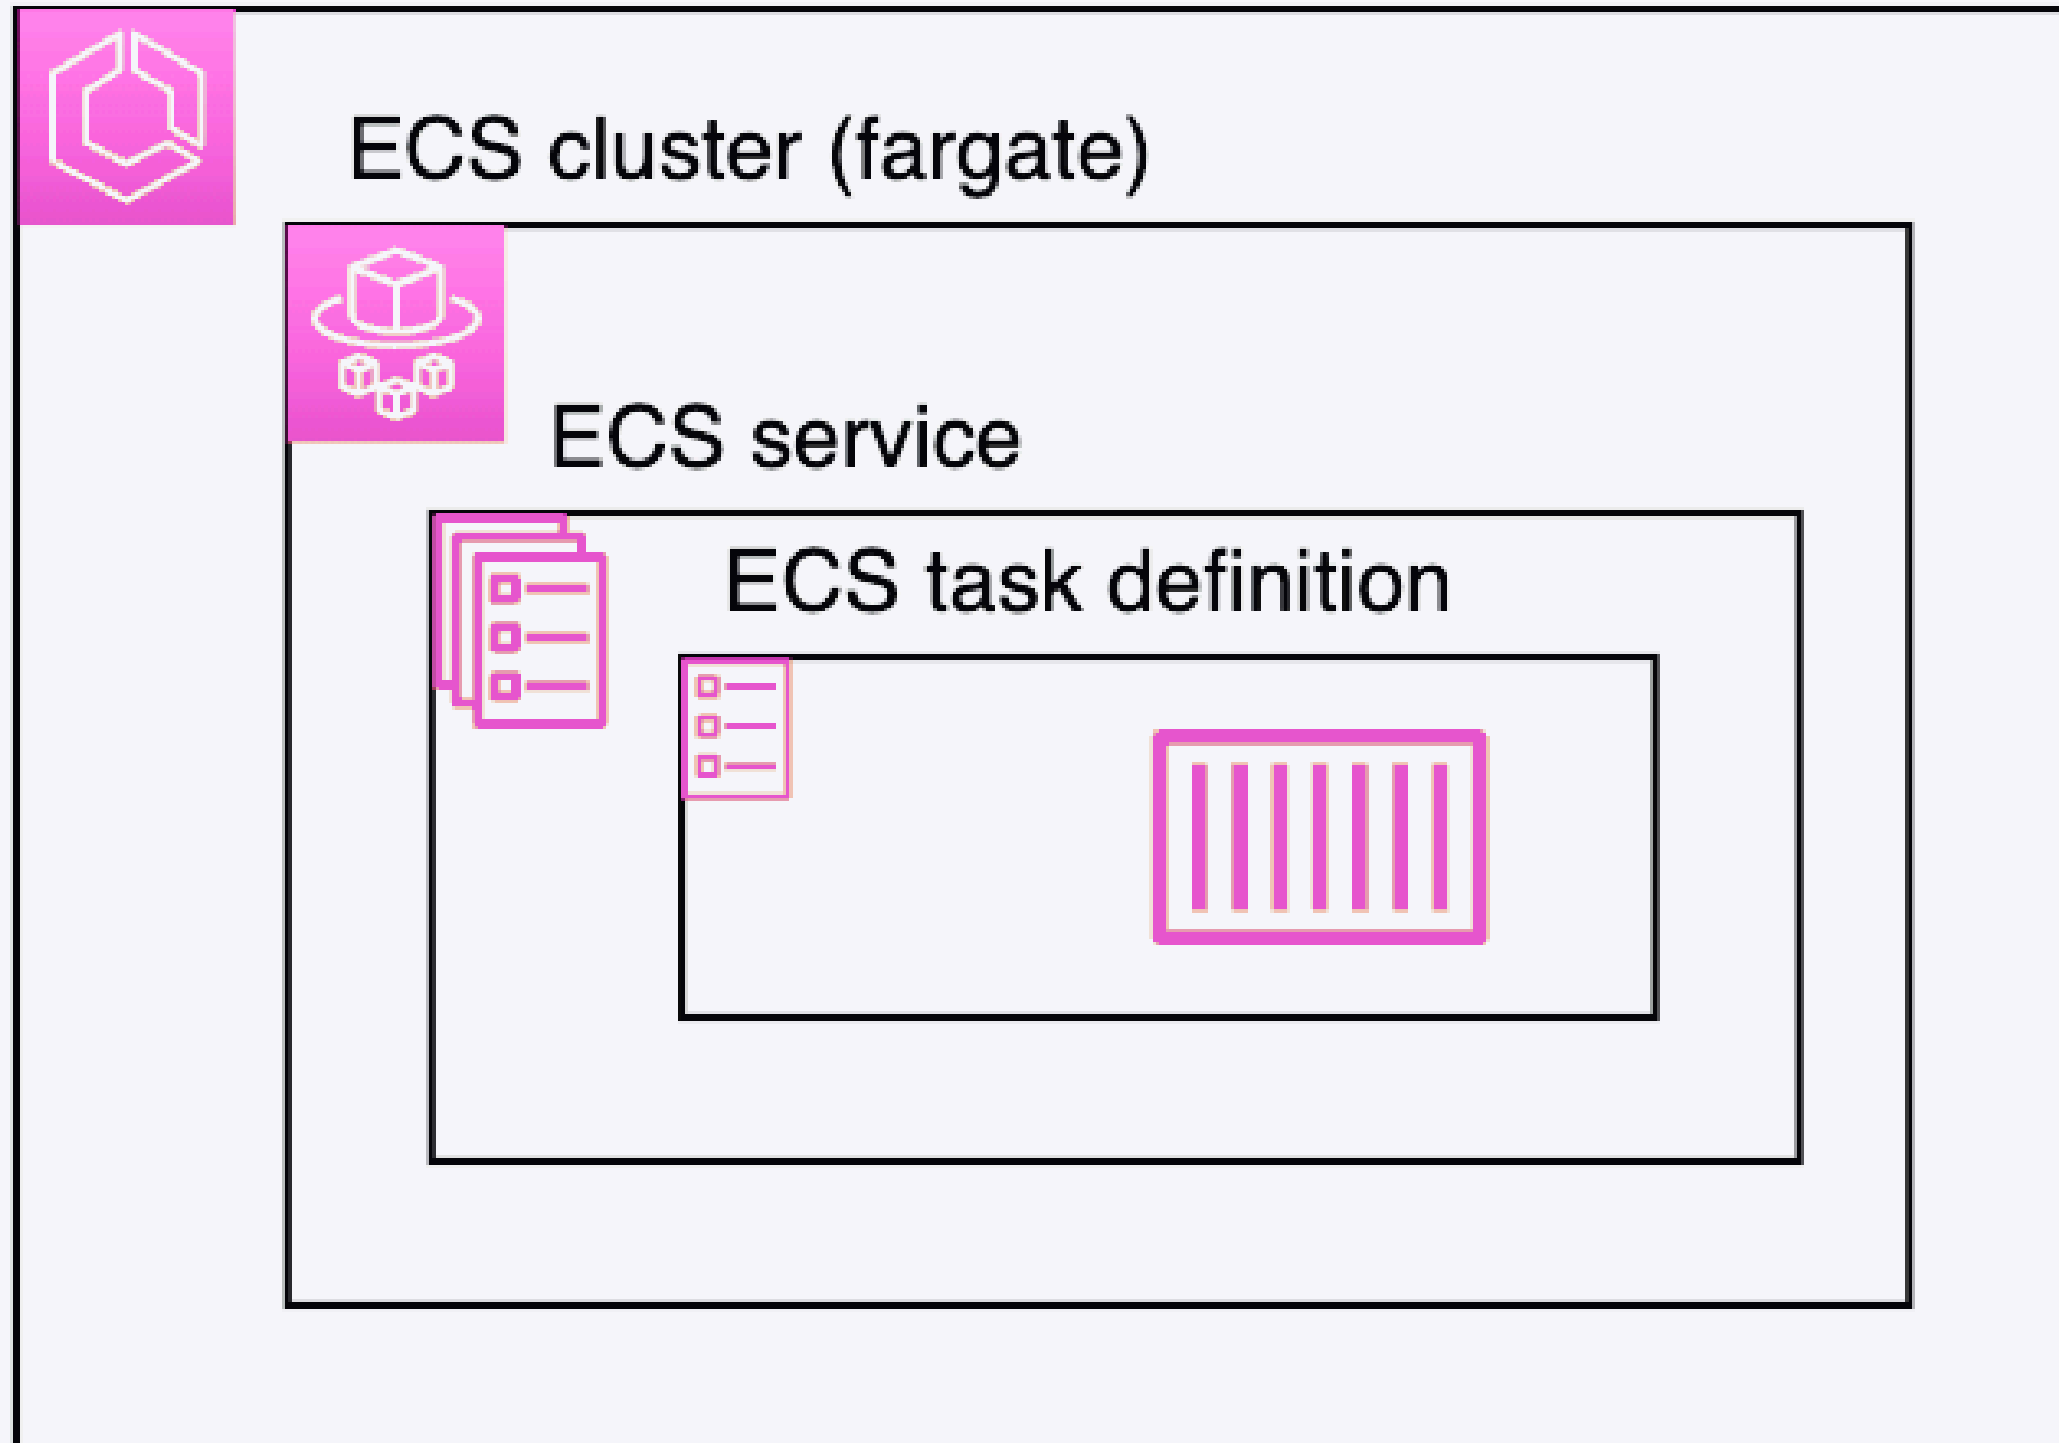

# ECS Terms

- **Cluster:** Group of Tasks and Services, hosts all the resources and infrastructure.
- **Service:** Handles Scalability and Load balancing of container.
- **Task:** Represents the running containers of your App.
